# The City of Florence Has Never Violated Drinking Water Standards for Lead.

Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. A high level of lead in drinking water can cause health problems, particularly in children. SCDHEC works to ensure that public water systems adhere to drinking water quality standards and regulations. Lead is rarely in drinking water when it leaves a treatment plant; however, it can seep into the water from old plumbing.

### Where Your Water Comes From

The City of Florence relies on groundwater from the Crouch Branch Aquifer as its primary supply source. The City provides drinking water for approximately 79,220 people, including 30,469 residences and 3,673 businesses. The groundwater well system supplies about 60% of Florence's drinking water. The City of Florence also operates the Frank E. Willis Pee Dee River Regional Surface Water Plant, which utilizes the Pee Dee River and provides approximately 40% of Florence's water supply.

## **Florence City Council**

Florence City Council governs and sets policies to manage and fund public utilities. City staff follows the necessary protocol to comply with all federal and state regulatory requirements. City Council meets the second Monday each month in Council Chambers at the City Center, 324 West Evans St. Customers and the public are encouraged to attend these meetings.

## If You Have Special Health Concerns

Some people may be more vulnerable to substances in drinking water than the general population. Immuno-compromised persons (such as persons undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly individuals, and infants) can be particularly at risk due to infections. These people should seek advice about drinking water from their healthcare providers. The Environmental Protection Agency (EPA) and the Centers for Disease Control (CDC) provide guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological substances. Further information is available from the Safe Drinking Water Hotline at 1-800-426-4791.

# **About This Report**

The report informs customers about water quality and increases customer understanding of drinking water and treatment. Federal authorities and laws prescribed the technical language, terms, descriptions, definitions, precautionary statements, and scientific data in this report. The South Carolina Department of Health and Environmental Control (SCDHEC) validated the sampling results listed.

You may call the EPA's Safe Drinking Water Hotline for more information about contaminants and potential health effects at 1-800-426-4791. For more information about this report, don't hesitate to contact Josh Whittington at (843) 665-3236.

# What's In Your Drinking Water

All drinking water sources are subject to potential contamination by naturally occurring or artificial substances. These substances can be microbes, inorganic or organic chemicals, and radioactive substances. All drinking water, including bottled water, may contain at least minor traces of some contaminants. Contaminants do not necessarily indicate that the water poses a health risk.

The City of Florence water system has prepared a source water assessment report. The information may be reviewed by contacting Malcolm Cook at (843) 665-3236.

# **2023 Water Quality Report**

Scotty Davis, Florence's City Manager, proudly announced the release of the 2023 Annual Water Quality Report, emphasizing the absence of any violations of the state and federal drinking water quality standards. Davis underscored the city's commitment to providing safe drinking water, labeling it as a fundamental service and a key priority for Florence.

The sampling data collected by the City of Florence is scientifically analyzed and confirmed by SCDHEC.

The 2023 annual report provides results of the challenging testing completed from January 1, 2023, through December 31, 2023. The city is committed to producing the highest quality of water and promoting quality of life for everyone. The sampling data is presented in a table included in this report.

#### Fluoride

TTHM

Fluoride is a naturally occurring element that helps prevent tooth decay. To maintain an acceptable level of fluoride a small amount of fluoride is added during the water treatment process, as recommended by the American **Medical Association Dental Association (A** 

# **2023 Water Quality Sampling** Results

The following table shows actual sampling results for substances detected in the Florence water systems for the period Jan. 1 to Dec. 31, 2023, compared with state and federal health and safety standards for those substances.
